Overview

Last year, when Yeti designed the SB5 with all-new geometry and design - they all thought it looked a lot like the old chum we knew and loved. When they got aboard this capable trail bike, Yeti were suddenly clearing technical climbs with far less effort and our descents were more playful and speedy than before. The seat tube was steepened to optimize pedalling position, while the head tube got a bit slacker so it was even more capable on the downhill. It's tough to make a great thing better, but we feel pretty good.
