Overview

The XC/Trail orientated AEffect SL wheelset comes with 24mm internal rim width to balance weight with optimal tire profile when combined with cross country and trail tires. In addition to a great rim, the AEffect SL incorporates a new Race Face Trace hub design with full cartridge bearings for extended life and durability. The hub also boasts a competitive 9.° of engagement using a durable the 3 pawl design. These hubs are tough, think a clydesdale with a motor kind of tough. AEffect wheels can handle almost anything you can throw at them.

- Brushed finish, water transfer graphics.
- One spoke length throughout wheelset.
- Rim decal kits available separately in 8 colours (sold separately).
